

ABSTRACT OF THE DISCLOSURE

Disclosed is a movable side step for a vehicle. The movable side step comprises a fixing means being connected to
5 a body frame of the lower portion of the vehicle, a stepping means being connected movably in forward and out backward to the fixing means, and an operating means for operating said stepping means according to the opening/shutting of a door of the vehicle. According to the movable side step of the present,
10 the vehicle may be driven more safely. Further, when the vehicle is parked, it does not require a wide parking space. Further, children or the old and the weak may safely get into or get out of the vehicle.
